## DETAILED ACTION

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3, 7 and 13, drawn to an explosively actuated tool, classified in class 29, subclass 798.
  - II. Claims 4-6, drawn to a cap, classified in class 220, subclass 200.
  - III. Claims 9-12, drawn to a method of assembling an explosively actuated tool, classified in class 29, subclass 434.
- IV. Claim 14, drawn to a firing mechanism, classified in class 227, subclass 9. The inventions are distinct, each from the other because of the following reasons:
- 2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a cap that is locked and a cap that requires rotation. The subcombination has separate utility by itself and can be in a combination other than one having a barrel as recited in the combination.
- 3. Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be

Application/Control Number: 10/667,606 Page 3

Art Unit: 3726

made by another and materially different process (MPEP § 806.05(f)). In the instant case the product could be made in a process other than the specific anchoring, rotating and locking steps of the claimed process, for example, by rotating the spring and then anchoring the spring to a mounting.

- 4. Inventions I and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require spring that is locked into a housing. The subcombination has separate utility such as for use in a combination that does not have a barrel.
- 5. Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product could be made in a process that does not have the claimed anchoring, rotating and locking steps of the process.
- 6. Inventions II and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as used to cap something other than for an explosively actuated tool. See MPEP § 806.05(d).

Application/Control Number: 10/667,606

Art Unit: 3726

7. Inventions III and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made in a process that does not have the claimed anchoring, rotating and locking steps of the claimed process.

Page 4

- 8. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 9. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 10. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marc Jimenez whose telephone number (571) 272-4530. The examiner can normally be reached on Monday-Friday between 5:30 a.m.-2:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bryant can be reached at (571) 272-4526. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
